Identification of a nucleotide sequence in the L1 identify the presence of HPV virus in every stage of infection and to distinguish between virus strains having the hazard and virus strains having middle/high hazard. This is the primer used to identify the E6 region of the low hazard HPV strains in infected cells, described in the method of the invention.

The method comprises extracting DNA from the cellular material, amplifying the DNA by using a polymerase, and identifying sequences complementary to sequences in the regions E (early genes) e.g. E6 and E7 of the HDV genes is a polymerase of the HDV genes of the HDV genes is the regions E (early genes) e.g. E6 and E7 of the HDV genes is the regions E (early genes) e.g. E6 and E7 of the HDV genes is the regions E (early genes) e.g. E6 and E7 of the HDV genes is the regions E (early genes) e.g. E6 and E7 of the HDV genes is the regions E7 of the HDV genes is the regions E (early genes) e.g. E6 and E7 of the HDV genes is the regions E7 of the HDV genes is the regions E (early genes) e.g. E6 and E7 of the HDV genes is the regions E7 of the HDV genes is the region E7 of the HDV genes is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The patent is for a rapid in situ hybridisation assay for detecting and typing human papilloma virus (HPV) in non-frozen cellular smears fixed t a support in absence of aldehyde-based crosslinking reagents. The assay comprises: (1) combining nucleic acid in the sample with at least one detectable probe able to hybridise with 1 or more HPV types; and (2) detecting presence or absence of hybrid complexes. Opt. several probes are used, eg one for HPV types 6 and 11, associated with benign warts, and one for types 16, 18, 31, 33 and 35, associated with cervical cancer. The assay can differentiate between HPV types. It is esp. used as a secondary test. The probes can be synthesised or cloned.

                    DNA construct CSL760 (AAT59431) codes for an E6/E7/E4 polyprotein (AAW01809) of human papillomavirus 6b (HPV6b), plus a C-terminal hexahistidine tag. It was obtd. by separate PCR amplification of the E6, E4 and E7 genes (see also AAT59412-15 and AAT59418-19) of HCV6b and their cloning into vector pSP70. The resulting E6/E7/E4 cassette was incorporated into pGEX-STOP to allow prodn. of the HPV6b polyprotein in E. coll. The E6/E7/E4 DNA construct, or the encoded polypeptide, can be used as a vaccine to generate a humoral and/or cellular immune response against HPV, esp. for treating genital warts and cervical cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 papillomavirus 6b (HPV6b). It was obtd. by separate PCR amplification of the E6, E4 and E5a genes (see also AAT59412-17) of HCV6b and their cloning into vector pSP70. The resulting E6/E5a/E4 cassette was incorporated into pGEX-STOP to allow prodn. of the HPV6b polyprotein in E. coli. The E6/E5a/E4 DNA construct, or the encoded polypeptide, can be used as a vaccine to generate a humoral and/or cellular immune response against HPV, esp. for

                                                                                                                                                                                                                                                                                                                                                                                                       DNA construct CSL673 (AAT59432) codes for an E6/E7/E5a/E4 polyprotein (AAW01810) of human papillomavirus 6b (HFV6b), plus a C-terminal hexahistidine tag. It was obtd. by separate PCR amplification of the E6, E4, E5a and E7 genes (see also AAT59412-19 of HCV6b and their cloning into vector pSP70. The resulting E6/E7/E5a/E4 cassette was incorporated into pGEX-STOP to allow prodn. of the HPV6b polyprotein in E. coli. The E6/E7/E5a/E4 DNA construct, or the encoded polypeptide, can be used as a vaccine to generate a humoral and/or cellular immune response against HPV, esp. for treating and the latter of the product of the polyprotein and the latter of the polyprotein and the latter of the polyprotein and the latter of the latter of the polyprotein to generate a plant of the polyprotein product of the polyprotein paper of the polyprotein paper of the polyprotein paper of the product of the polyprotein paper of the polyprotein paper of the product of the polyprotein paper of the paper of the polyprotein paper of the paper of the

A DNA construct (AAT59450) in vector pTrcHisA codes for an E2/E4/E5a/E5b/E6/E7/E1 polyprotein (AAW01816) of human papillomavir 6 (HPV6), plus an N-terminal hexahistidine tag. It was obtd. by amplification of the individual early genes (see also AAT59436-49) and their cloning into pTrcHisA. The DNA construct, or the encoder polyprotein, can be used as a vaccine to generate a humoral and/or cellular immune response against HPV, esp. for treating genital

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SSSSS
                                                 The invention relates to a method for detecting the presence of a human CC papillomavirus (HPV) subtype in a nucleic acid containing sample. The method comprises amplifying the nucleic acid in the presence of a CC method comprises amplifying the nucleic acid in the presence of a CC polymerase and a plurality of oligonucleotide sets, allowing digestion of each fluorescent probe during amplification to dissociate the fluorophore from the quencher molecule, detecting a change of fluorescence upon CC dissociation, and determining if the sample is positive for the HPV subtype if a change of fluorescence is detected in at least two emission maxima. Each oligonucleotide set mentioned above consists of an HPV discriminatory PCR primer hybridising to a first location of an HPV subtype, a reverse discriminatory PCR primer hybridising to a second clocation of the HPV subtype downstream of the first location, and a country part of the HPV subtype downstream of the first location, and a country part of the HPV subtype between the first and the second locations, where each oligonucleotide set specifically hybridises to a different HPV amplication derived from the same HPV subtype. The change of fluorescence corresponds to the occurrence of nucleic acid amplification. The method of the present invention is useful in PCR-based assays for detecting HPV subtypes in clinical samples. This sequence represents a PCR primer used to the function of the primer used in the second courter of the presents a PCR primer used in the process of the presents a PCR primer used to the courter of the presents a PCR primer used to the courter of the presents a PCR primer used to the present and the second primer used the process of the presents a PCR primer used to the present and primer used the process of the presents and primer used the process of the primer used the process of the presents and primer used the presents and primer used the process of the primer used the presents and primer used the primer used the process of the primer used the

Sequences AAS2991-AAS30164 represent genomic DNA molecules, which encode the lung antigen polypeptides of the invention. Lung antigen polypeptides and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, cc mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A cc pathological condition can be determined by detecting the presence or absence of a mutation in a lung antigen polynucleotide. The treatable cd disorders include autoimmune diseases such as rheumatoid arthritis, chyperproliferative disorders such as neoplasms of the breast or liver, cc disorders such as cerebral ischaemia, nervous system disorders such as cardiac arrest, cerebrovascular cd disorders such as corneal infection, endocrine disorders such as corneal infect

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of novel human crespiratory antigens (AA017685-AA017975), and CANONA and genomic sequences encoding for these polypeptides. The sequences of the invention are useful for preventing, treating and/or prognosing disorders related to the respiratory system including throat this product of disorders (e.g. vocal cord paralysis, tonsillitis, and laryngitis), lung disorders e.g. pneumonia, allergic disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose disorders and cancers of the respiratory tissues e.g. lung cancer. The polynucleotide sequences of the invention are useful in gene therapy and antisense therapy.

AAS28161-AAS28764 represent genomic sequences encoding for novel human respiratory antigens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC lung antigen polypeptides of the invention. Into their associated polynucleotides are useful in the diagnosis, treatment can and prevention of various types of disorders in e.g. humans, mice, condition can be determined by detecting the presence or absence of a condition can be determined by detecting the presence or absence of a condition can be determined by detecting the presence or absence of a condition can be determined by detecting the presence or absence of a condition in a lung antigen polynucleotide. The treatable disorders can include autoimmune diseases such as rheumatoid arthritis, cardiar disorders such as cardiac arrest, cerebrovascular conditionascular disorders such as cardiac arrest, cerebrovascular cardiovascular disorders such as cardiac arrest, cerebrovascular conditionascular disorders such as cardiac arrest, cerebrovascular cardiovascular disorders such as cardiac arrest, viruses and fungi, coular disorders such as corneal infection, endocrine disorders such as corneal infection, to regenerate tissues and in complex to maintain organs before transplantation, to regenerate tissues and in communication, but was obtained in electronic format directly from wipo
                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the isolation of novel human respiratory antigens (AAU17685-AAU17975), and cDNA and genomic sequences encoding for these polypeptides. The sequences of the invention are useful for preventing, treating and/or prognosing disorders related to the respiratory system including throat disorders (e.g. vocal cord paralysis, tonsillitis, and laryngitis), hung disorders e.g. pneumonia, allergic disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose disorders and cancers of the respiratory tissues e.g. lung cancer. The polynucleotide sequences of the invention are useful in gene therapy and antisense therapy. AAS27869-AAS28159 encode for novel human respiratory antigens. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published_pct_sequences.

The invention relates to a polynucleotide having any of 6006 specific sequences (ABZ50888-ABZ56893), which are expressed by a fungus under specific culture conditions including one or more of eutrophic, oligotrophic, solid, early germination, alkaline, high temperature, low temperature or maltose culture or polynucleotides stringently hybridising

polynucleotides

for monitoring

```
progress of fermentation and the growth conditions of a fungus, especially of Aspergillus oryzae which is widely used in industrial fermentation. Also monitoring for funguary for functions of the printed Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Direct Submission
A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with EST homology (covering
                                                                                                              (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RGP. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DDHJ accession no. and RGP clone ID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Published Only in Database (2001)

'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence. The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of OJ1060_D03 clone has an overlap with OJ1127_E01 clone(DDBJ: AP003747)at 5' end and an overlap with OJ1113_E01(DDBJ: AP005437) at 3' end. The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         almost the entire length of partial sequence) is classified as an

On Sep 21, 2002 this sequence version replaced gi:21737824.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Direct Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Unpublished
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Direct Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (109-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 9, 2003 this sequence version replaced gi:23265564.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Worley, K.C.

On Sep 21, 2002 this sequence version replaced g1:21743898.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotunn sequence reads. Both end sequences and whole genome shotunn sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submitted (21-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Médicine, One Baylor Plaza, Houston, TX 77030, USA
